

VIRTUOSITY SUSTAINMENT SERVICES

When you're spending your time and energy on staying ahead of the competition and managing faceless digital threats, regular system updates may take a back seat, leaving your network and devices vulnerable to costly attack.

Open source technology like Virtuosity can provide endless possibility for customization, but a steep learning curve and constantly evolving ecosystem can put you at a disadvantage.

So, how do you keep from falling behind?

Sustainment Services Make It Easy To Grow

You can scramble to patch your products, release after release, or you can make it easy on yourself, and let us handle the updates.

Virtuosity Sustainment Services from DornerWorks will provide you with timely updates for all your Virtuosity components, including:

- Boot ROM
- Second Stage Bootloader (U-Boot)
- Xen
- Linux Kernel

The core update service will deliver a **Xen Security Advisories (XSA)** impact analysis in 1 working day, with distribution updated and notification sent in 5 working days from the patch announcement.

You'll also get the full patch documentation, so you can decide whether or not to include the update.

Rest Easy While Your Platform Updates Automatically

The Sustainment Services package provides the latest updates to Virtuosity to align to latest component releases, notifications as soon as your updates are made, and access to *all previously released updates*.

Customize this package to your product profile, with:

- Quicker turn around for Linux security updates
- Guest OS updates
- Library/app updates (i.e. Linux files system contents)

Worry-Free Virtualization

Contact us today and get started with a Virtuosity Sustainment Package.

During a free brainstorming session, we will determine a course of action that best meets your technical needs, and paves the way for future success.

Our services, your success

Virtuosity Sustainment Services can optimize your virtualized platform, and save you the frustration of patching your technology each time it evolves.

Scale your project worry-free, knowing that critical update impact analysis will be delivered within 5 working days, and your entire Virtuosity distribution updated within 10.

Proven expertise, on your side

We've been working on virtualization technology and open source Type-1 hypervisors like Virtuosity for years. **DARPA** awarded DornerWorks a SBIR contract to develop a defense-class hypervisor for aerospace applications.

As an Alliance Premier Program Partner, **Xilinx** trusts our engineering services for development work on complex hardware like the Zynq UltraScale+ MPSoC. And our expertise with **NXP** components, the i.MX8 processor family in particular, has brought our team Proven Partner status.

Virtualized open source technology can be complicated,
but it doesn't have to be.

Get started with **Virtuosity Sustainment Services** today and replace your worries with confidence!
